

CHAIRMATs

Chairmats are ideal for office and home environments to protect floor surfaces from excess wear.

WHY DO YOU NEED A CHAIRMAT?

- Floor coverings are an expensive investment. You want that investment to last for years.
- You may not realise but your castor chairs can cause serious damage to your floors over time.
- You can simply and effectively protect your floors from the excess wear that chair castors can cause by using a chairmat.
- Chairmats are designed to protect your floor covering investment while still allowing the beauty of your floor to show through.
- You can get chairmats for carpeted areas as well as hard floor areas.
- There is a chairmat to suit almost every floor type.

CHOOSING YOUR CHAIRMAT

When choosing a chairmat for carpets, its important that you choose the correct mat for the carpet thickness to ensure long life for both the chairmat and your carpet. Chairmats for carpets are designed with grippers for holding it in place. The grippers and chairmat thickness vary in size depending on the carpet thickness.

If you use a low pile chairmat on high pile carpet, the mat will crack, simply because the mat is not the correct thickness to 'absorb' castor impact as they roll on the thick carpet.

Press a pin or similar object through your carpet until it reaches the floor, then measure the length as a guide to how thick the carpet and underlay are.

Jastek chairmats are suitable for a variety of floor coverings. Remember to check the carpet thickness before choosing the relevant carpet chairmat. Please refer to the guide below before choosing your chairmat

- Budget Chairmat**
For use on carpet 6mm thick or less with no underlay
- Low Pile Chairmat**
For use on carpet 6-9mm thick including underlay
- Medium Pile Chairmat**
For use on carpet 9-12mm thick including underlay
- Deluxe Pile Chairmat**
For use on carpet 12-15mm thick including underlay
- Super Deluxe Chairmat**
For use on carpet 15-18mm thick including underlay.
- Hard Floor Chairmat**
Suitable for most hard floor surfaces
